CURRENT STATUS

I am writing to follow up again on the housing issue previously reported, as I have not yet been able to record a resolution. I would be grateful for a further update on progress. The information recorded to date is summarised below.

Updated Position

Original Complaint Date: 2 January 2026

Days Since First Report: 157 days

Days Since Last Communication: 108 days

Days Since Last Portal Submission: 114 days

Last Status Change: 108 days ago

Current Status: Awaiting Response

Executive Summary

Automatically generated from information recorded by the resident. Not legal advice.

This case concerns a reported damp & mould issue at 14 Elmwood Court, Manchester. The matter has been recorded for 157 days and is currently "Awaiting Response". The resident has recorded 6 health impact entries, 8 items of evidence (6 photographs, 2 documents), 2 portal submissions, 5 logged communications and 3 household vulnerabilities.

Issue Type: Damp & Mould

Property: 14 Elmwood Court, Manchester

Duration: 157 days

Current Status: Awaiting Response

Health Impacts Recorded: 6

Evidence Recorded: 8

Previous Reports Recorded: 2

Vulnerabilities Recorded: 3

Why This Matter Requires Attention

- The issue has been recorded for 157 days and remains "Awaiting Response".
- Health impacts have been recorded for the household (6 entries).
- The household includes recorded vulnerabilities: Child under 5, Asthma, Pregnancy.
- 8 items of supporting evidence has been recorded.
- The resident has attempted contact: 2 portal submissions and 5 logged communications.

This summary is provided for context only to help the reader understand the case at a glance. It makes no legal conclusions.

Health & Occupant Impact Summary

Displays only information entered by the resident. Provided for context only — no legal conclusions are made.

This case includes:

- Symptoms reported by occupants
- GP attendance recorded
- Hospital attendance recorded
- Missed school recorded
- Medical concerns recorded
- Asthma / respiratory condition recorded in household

These factors may be relevant when assessing the urgency of this issue and the priority of a response.

MEDICAL CONCERNS

Date	Type	Details
15 February 2026	Symptoms	Both children reporting sore throats and the adult occupant experiencing recurring headaches attributed to the damp environment.
8 February 2026	Hospital Visit	Attended out-of-hours service after the child struggled to breathe overnight; nebuliser administered.
27 January 2026	Missed School	Child kept off nursery for two days due to a severe asthma flare-up.
18 January 2026	GP Visit	GP appointment regarding the child's worsening asthma symptoms; damp housing noted as a likely contributing factor.

Date	Type	Details
18 January 2026	Medication Change	Reliever inhaler dosage increased by GP following the appointment.
6 January 2026	Symptoms	Child (age 4) experiencing increased night-time coughing and wheezing, waking 3-4 times per night.

Requested Actions

The resident respectfully requests the following in relation to this housing issue:

- Investigation of the reported issues
- Written findings following the investigation
- Proposed remedial actions
- Timescales for any required works
- Ongoing communication regarding progress

Health Entries Logged: 6

Resident Concerns

Reproduced from the resident's own records. Accepted English translations are used where available.

Issue Description

Black mould first appeared on the north-facing external wall of the main bedroom in late December 2025 and has since spread across the wall behind the wardrobe, around the window reveals and onto a section of the ceiling. Despite wiping the affected areas with mould remover on numerous occasions, the mould returns within days. The bedroom is permanently cold and the window streams with condensation every morning, leaving the curtains and sill damp. The room is used by my two children, including my youngest who is four years old and has been diagnosed with asthma. We have had to move both children into the smaller second bedroom, which is now overcrowded, because the main bedroom is no longer safe to sleep in. The damp has also caused a musty smell throughout the flat and has begun to damage our furniture and the children's clothing stored in the affected wardrobe.

Portal Notes

- Logged the mould issue through the online repairs portal with photographs attached.
- Raised a health and safety concern with the local authority due to the lack of response from the landlord.

Communication Notes

- Reported the mould in the main bedroom and requested an inspection as soon as possible. Attached two photographs.
- Received an automated acknowledgement confirming a reference number but no inspection date.
- Called the repairs line and was told the case would be 'escalated' but given no firm date.
- Sent a follow-up email attaching the GP letter and explaining the impact on my child's asthma. Requested an urgent inspection.
- Received a letter stating an inspection would be arranged in due course, with no specific date provided.

Health Diary Entries

- Child (age 4) experiencing increased night-time coughing and wheezing, waking 3-4 times per night.
- GP appointment regarding the child's worsening asthma symptoms; damp housing noted as a likely contributing factor.
- Reliever inhaler dosage increased by GP following the appointment.
- Child kept off nursery for two days due to a severe asthma flare-up.
- Attended out-of-hours service after the child struggled to breathe overnight; nebuliser administered.
- Both children reporting sore throats and the adult occupant experiencing recurring headaches attributed to the damp environment.

Recorded Household Vulnerabilities

The information below has been provided by the resident to assist in understanding household circumstances.

- Child under 5
- Asthma
- Pregnancy

Additional notes

My youngest child (age 4) has clinically diagnosed asthma and uses a preventer inhaler daily. I am also currently 24 weeks pregnant. Both factors make continued exposure to damp and mould a serious concern for our household.

The following household circumstances have been recorded by the resident and may be relevant when considering the urgency and handling of this issue. This information is provided for context only.

- Household includes a young child (under 5).
- A household member has asthma or a respiratory condition.
- A household member is pregnant.
- 6 health impact entries have been recorded in relation to this issue.

Case Timeline

A chronology of the case, most recent first. Internal document-generation activity is omitted.

Date	Event	Details
20 February 2026	Response received	Letter received stating an inspection would be arranged, with no date confirmed.
14 February 2026	Complaint escalated	Health and safety complaint raised with Manchester City Council.

Date	Event	Details
2 February 2026	Follow-up sent	Follow-up email sent to the repairs team with the GP letter attached.
18 January 2026	GP visit logged	GP appointment regarding asthma; damp housing noted as a contributing factor.
10 January 2026	Acknowledgement received	Automated acknowledgement received from the housing association.
9 January 2026	Evidence uploaded	Initial photographs of the bedroom mould and window condensation uploaded.
6 January 2026	Health entry added	Child's worsening night-time asthma symptoms recorded.
2 January 2026	Issue reported	Mould in main bedroom first reported via landlord portal (Ref: NH-88213).

Guidance Commonly Relevant to This Situation

The references below are provided for information only. They are general signposts to recognised UK housing standards and guidance relevant to this type of issue. They do not constitute legal advice, make no legal conclusions, and assert no finding of breach by any party.

- Awaab's Law (Social Housing (Regulation) Act 2023) — Introduces timescales for social landlords to investigate and address damp and mould hazards.
- HHSRS — Damp & Mould Growth Hazard — The Housing Health and Safety Rating System recognises damp and mould as a potential hazard category.

- Housing Ombudsman — Spotlight on Damp and Mould — Guidance encouraging a proactive approach to reports of damp and mould.
- Housing Ombudsman — Vulnerable residents — Guidance encourages landlords to take account of household vulnerability when responding to reports.
- HHSRS — Damp & Mould and respiratory health — The rating system recognises that damp and mould can carry heightened risk for occupants with respiratory conditions such as asthma.

This document has been generated using information provided by the resident. It presents facts, evidence and a record of events. It is intended as a communication and organisation aid and does not constitute legal advice. No legal conclusions are made or implied.
